### [Innovative process for converting tannery waste into collagen protein with a range of industrial applications](#)

A UK research centre has developed an innovative process for converting solid waste from tannery processes into collagen protein, using enzymatic hydrolysis. There are manifold potential applications, such as additive to adhesives used in the manufacture of plywood, chipboard and latex. It offers an environmentally friendly alternative to landfill methods of waste disposal. The research centre is seeking commercial, joint venture, financial or license agreements to exploit market opportunities.
